Middle Atlantic Products Chosen for General Dynamics Global Security Operations Center Solution

September 18, 2012

Middle Atlantic's VisionFrame video walls are among the technologies General Dynamics selected to include in its Global Security Operations Center and Customer Integration Lab.

General Dynamics selected ergonomic ViewPoint Consoles, scalable VisionFrame video walls and equipment rack systems from Middle Atlantic Products, Fairfield, N.J., for inclusion in its Information Technology Global Security Operations Center (GSOC) and Customer Integration Lab.

The GSOC integrates third-party security technologies from a number of partners to provide a cost-effective and scalable security solution that allows customers to monitor and protect people, property and assets using fewer resources. By providing a common operating picture, GSOC enables coordinated response to events, as well as sharing of business and risk intelligence.

All the GSOC elements come together in two Customer Integration Labs to provide a staging ground for customers to use in their strategic security planning and infrastructure design.

“We are very pleased to be part of this solution. General Dynamics’ vision for a complete, scalable security solution is exactly what the market needs, and we look forward to providing our rack systems and technical furniture for this important project,” says Kevin Handerson, director of marketing for Middle Atlantic Products.
