## Monitoring Console System

Middle Atlantic Products is pleased to announce a new Security Console System that provides exceptional strength, fast assembly, and all the benefits you expect from an application-engineered offering.

From single workstations to complete operation centers, this flexible, scalable system was designed for operator ergonomics and effectiveness.

The technical details were designed for integrators – including equipment mounting, cable routing, cooling and power distribution.

### Certified in Performance

### Heavy-Duty Construction

Console bays are fully welded Uni-Frame™ construction, and made from heavy-gauge steel. They are designed to work hard, day in and day out.

### Fast Installation

Factory welded bays gang together quickly and easily. Each installation comes with Middle Atlantic's unique "SmartStart" kit to make the installation go smoothly.

### Easy To Layout and Order

Use our easy 3D layout software, or let us help you plan the room.

(shown with turrets, slide out keyboard trays, wedged design)

### Standard Work Surface Finishes

Free CAD compatible 3D layout & specification software creates elevations, plan views, purchase orders and quotes in minutes.

No third-party software is required. Visit [MiddleAtlantic.com](http://MiddleAtlantic.com) to download.

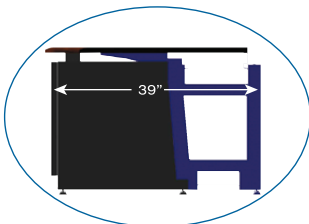

## Versatility & Speed are Built In

Pre-installed junction box in each 24" or larger bay speeds electrical hookups.

Bay extenders provide for mounting equipment up to 39" deep.

Pre-installed cable ducts speed equipment connection and wiring for easy assembly.

Optional slide out shelves provide easy access to equipment connections for maintenance or adjustments.

## Key System Components

This console system includes 6 basic elements, each of which is described below. Together, these simple parts can be configured to serve a wide range of application needs. Use our free Designer™ software or call us for help.

### Straight Bays

Bays are pre-assembled and fully welded, and come in standard 12", 24", 36", 48", and 72" widths for mounting equipment and providing workspace. 6" and 12" units are available to adjust overall widths and provide cable routing between bays.

### Wedges

Standard wedges are fully welded for quick installation, available in 15°, 22-1/2°, 30°, 45° and 90° angles to create concave ergonomic workspaces. Reverse angle standard wedges are also available in 15°, 22-1/2°, and 30° angles, to create convex or serpentine layouts.

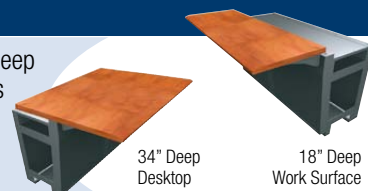

### Desktop Turrets

4, 6 and 9 space turret racks can be mounted behind 18" work surfaces. Call us for information about custom turrets for 34" deep desktops. Monitor mounts can attach behind turrets.

### Work Surfaces

Two standard work surfaces are available: 18" deep console-style, which allows for easy top access to equipment, and 34" deep desktop-style that provides more work space where top access is not required.

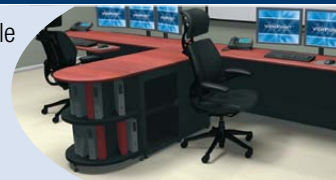

### Monitor Mounts

Extensive selection of fixed and articulating mounts, including single, double, triple and large format models. Mount any LCD with standard VESA mounting hole patterns.

### Radial Storage Binders and Free Standing Storage Cabinets

New storage cabinet matches appearance and style of the ViewPoint™ system to provide additional storage space. Keep essential reference materials close at hand with the new Radial Binder Storage cabinet, a new option in the ViewPoint™ system.

### Technical Support Hotline
